

RM-MultiStore Head Office Solution for MYOB RetailManager®

- Head office stock data management
- Transfer stock between stores
- Lookup stock availability at each store
- Head office ordering system
- Consolidated customer statements
- Comprehensive group reporting at head office
- Style Colour Size Matrix

RM-MultiStore is an easy to use head office data aggregation tool that allows retailers with multiple stores using MYOB RetailManager® to send data from each store back to one or more head offices.

Ideally suited to small to medium enterprises, RM-MultiStore is Wide Area Network software which uses the Internet for communication and therefore is inexpensive to operate, gives you a single point of control, and best of all it works seamlessly with MYOB RetailManager®.

How it Works

RM-MultiStore comprises of 5 modules that work together seamlessly.

- WAN Client – manages the exchange of data from each store to head office
- WAN Lookup – allows stores to see stock on hand data from other stores
- WAN Reports – allows for management reports to be viewed at head office
- WAN Server – is the control centre of RM-MultiStore at head office
- WAN Export - recreate the stores entire database

WAN Client - is installed at each store on the main computer

All data transmitted is encrypted for security and compressed for speed. The file exchange facility allows the stores to receive and send files to head office, including the end of day MYOB® Accounting data if required. WAN Client can be password protected and operates automatically using a built-in timer, allowing information to be transmitted back to head office at preset intervals.

WAN Lookup - can be installed on every computer in the store

WAN Lookup allows the stores to see stock on hand at the other stores. Staff can quickly locate items in other stores by searching on either the full or partial barcode and/or description.

WAN Reports - can be installed on any computer at head office

Compare store performance at a glance; the reports engine offers numerous reports including sales, inventory, takings and profit. A full list of the consolidated reports can be found on our web site at www.twotongue.com.au. Reports can be displayed to screen or sent to a Microsoft® Excel file for further analysis and you have the option of reporting on single or multiple stores. As most retailers have their own unique requirements, reports can be designed specifically for you - Two Tongue Technology will assess customised reports on a case by case basis.

WAN Server - is installed at head office

This is the control centre of RM-MultiStore, all data transmitted from the stores is consolidated here. Once installed at head office you can look forward to global reporting, inventory control and sales analysis. WAN Server operates automatically using a built-in timer, is easy to use and includes the following functions:

- Create new Stock, Staff, Customers and Suppliers in selected stores. An existing stock item from one store can be propagated to another store and new stock items can be imported and created from a spreadsheet.
- Style Colour Size Matrix for clothing and footwear retailers allows easy stock code creation.
- Edits and Mass Edits of stock, pricing, staff, customers and suppliers can be sent to any store to standardise information across the stores.
- Mass Propagate allows you to find then create stock, staff, customer or suppliers that exist in some stores and not others to resynchronise the stores database.
- Stock Delivery permits head office to send purchase orders to the store's MYOB RetailManager®.
- Stock Transfer allows you to transfer stock between company owned stores and/or franchisees. Note: stock transfer is not compatible with duplicate barcodes.
- Consolidated Sales Summaries allow head office to see how the stores are performing in terms of sales, average sales and gross profit.
- Authorised managers can remotely request the stores' sales figures by email, using the Advanced Data Access feature.
- File Exchange permits head office to send and receive computer files from the stores including rosters, timesheets, spreadsheets, word documents and MYOB RetailManager® export files.
- Export recreates a store's entire MYOB RetailManager® database at head office. This effectively means that there is a remote copy (backup) of the store's database at head office.
- Stock Lookup allows you to see every store's available stock on hand by searching on either the full or partial barcode or description.
- The Head Office Ordering System allows head office to create purchase orders for one or more stores.

RM-MultiStore

Head Office Solution for MYOB RetailManager®

RM-MultiStore Technical Support and Upgrades

The software is available either as an outright license or on a rental basis (charged quarterly in advance) according to your business needs. As a licensed RM-MultiStore rental user, you are automatically covered for free upgrades and technical support. When you purchase RM-MultiStore as an outright license, technical support and upgrades for 12 months are included at no extra charge. If you would like to trial RM-MultiStore, please contact us or one of our resellers.

Other Solutions from Two Tongue Technology

Cooking is a collection of tools and utilities for the MYOB RetailManager® database. Customer e:Mailout allows you to create and send emails to your customer list. Mailout Export creates a mail out list of your customers. The Mass Delete tool deletes stock items, package codes and customers.

Price Rounding allows you to selectively round sell prices and the Data Editor allows you to change data in bulk. The Clone Database utility allows you to create a new database from an existing one. Cooking also features a Password Reminder and is compatible with MYOB RetailManager® versions 4.3 to 12.5.

Did You Know?

RM-MultiStore and Cooking are written by TwoTongueTechnology Pty Ltd (formerly Blue Tongue Technology, winners of the 1998 Channel9 Small Business Show Business Software Awards). In 1999, MYOB Australia purchased our award-winning software Digi-Till™ which, after being upgraded and enhanced, is now called MYOB RetailManager®.
